

ABSTRACT OF THE INVENTION

The present invention relates to a computer accessible system for electronically storing a model which communicates the physical attributes of a structure along with warranty, insurance and other information relative to that structure. The system of the present invention integrates physical information in a model which is displayed as a physical representation of the structure with other non-physical information. Selecting specific areas of the model provides access to data regarding non-physical characteristics of that area of the structure and the contents thereof. Data relevant to warranties, insurance, maintenance or other information can be accessed by selecting portions of the model or indices attached or related to that portion. Systems of the present invention allow multiple users to remotely access the information and model via a computer network, such as the Internet, in order to make informed decisions regarding the structure and its characteristics.
